गृहकार्य : पेज नं. ८८ को अभ्यास ६ को प्रश्नको उत्तर लेख ।

Subject- Mathematics

Thus, to find the prime factors of a given number, we should start to divide the number by the lowest prime number. We should continue division till the quotient becomes a prime number.

3.5 Process of finding multiples

Classwork - Exercise

1. Let's multiply and write the products in the blank spaces.

a) $3 \times 1 = \underline{\quad}$, $3 \times 2 = \underline{\quad}$, $3 \times 3 = \underline{\quad}$
 $3 \times 4 = \underline{\quad}$, $3 \times 5 = \underline{\quad}$,

3, 6, 9, 12, 15 are the first five multiples of 3.

b) $4 \times 1 = \underline{\quad}$, $4 \times 2 = \underline{\quad}$, $4 \times 3 = \underline{\quad}$
 $4 \times 4 = \underline{\quad}$, $4 \times 5 = \underline{\quad}$, $4 \times 6 = \underline{\quad}$

4, 8, 12, 16, 20, 24 are the first six multiples of 4

2. a) What are the first five multiples of 2 ?

b) What are the first five multiples of 5 ?

In this way, to find the multiples of a given number, we should multiply the number by any natural number.
