Subject-English

Writing

Read this description of the jasmine flower.

The jasmine is a small, white flower on a green stalk. It has a pleasant smell. There are two kinds of jasmine. One kind grows on creepers. Those flowers are thin and long. The other kind grows on small plants. Those flowers are short and round and have many rows of petals. Jasmine flowers are made into garlands. They look very delicate and beautiful and spread their scent around. That is why I like them.

Given below are the names of four common flowers. Choose the one you like the most and write a short paragraph on it. Write about its size, shape, colour, smell, appearance, stalk, petals, and why you like it.
